

BUILD YOUR OWN AI SYSTEM

Build your own system. Brick by brick.

You pick only the bricks your business needs — email, invoices, stock, chat. You teach them how you work. You approve what goes out.

Eve is assembled in Prague

Your build · brick by brick

You assemble it from what you need. Nothing more.

EMAIL

Customer emails, answered overnight.

A customer asks about a late delivery. Eve checks the order and drafts the reply in your tone. It waits for you — nothing leaves without approval.

STOCK

Low stock never surprises you again.

Eve watches your inventory and your suppliers' delays. When something runs low, the order is already drafted — you just say yes.

CHAT

Ask your business anything.

One place to talk to Eve — in the office or on your phone. Ask what shipped, what's stuck, what needs you today.

INVOICES

Paperwork that files itself.

Invoices come in, get read, matched to orders and handed to your accounting — with a tidy trail you can check any time.

It learns how you work.

Correct a draft once and Eve remembers. Everything it learns is written down in plain words — rules you can read, edit or delete. Nothing hides in a black box.

“Orders from Slovakia ship with the express carrier.”

a rule you taught Eve — tap to edit

You stay in charge.

Eve prepares, you decide. Every message, order and payment waits for your approval — until you decide it doesn't have to.

Your data stays yours.

Runs where you choose

In our cloud, in yours, or on your own server.

Your data belongs to you

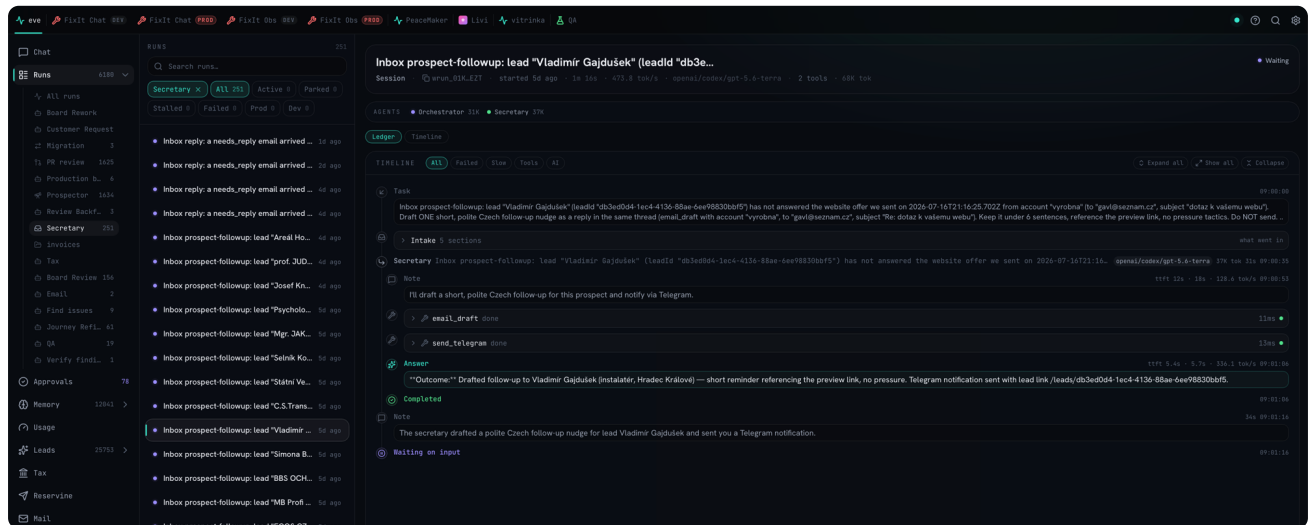

Every record stays your property — take it with you any time.

Locked by design

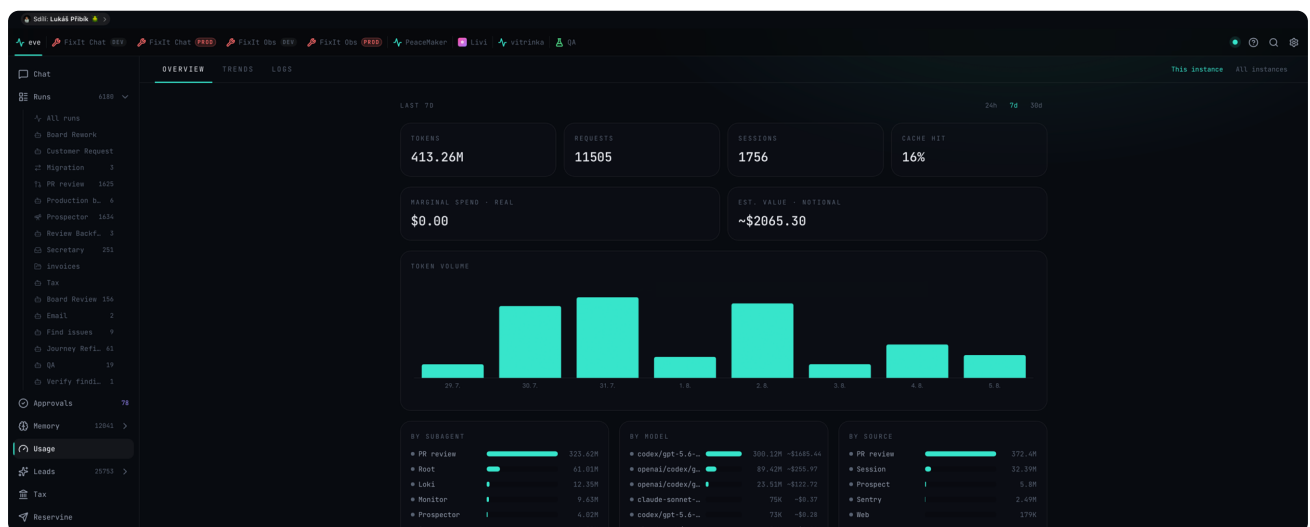

Passwords and connections are encrypted so that only you can unlock them — not even we can read them.

So what does it look like?

Eve isn't a concept. These are live screens from businesses running on it right now.

The control room — every run, every step, the whole decision trail.

Spend across every agent and model — you know what cost what.

Eve for developer teams.

The same platform reviews code, watches production and opens fix PRs. If you build software, Eve has a desk for you too.

Eve — your partner in business.
